STORYBOTS

The
MOON'S
Time to Shine

The sky is clear.
The night is fine.
The moon now has
its time to shine!

From here on Earth,
the moon looks bright.

But did you know
it makes no light?

The moon is made
of rock, you know.

The question is,
what makes it glow?

The sun's light hits
the moon in space,
and that lights up
its rocky face.

The light that
bounces off,
you see,
comes speeding down
to you and me.

The moon is moving
as it glows.

Round and round
the earth it goes!

The earth and moon
go round the sun.

In one whole year,
their trip is done.

Because of how
the moon is lit,
we see it all . . .

. . . or just a bit.

But there is more
for us to know.
We want to visit.
Off we go!

Before too long,
our ship can land.
What adventures
we have planned!

We drop the ladder.
Down we go.
Easy does it.
Nice and slow.

The moon has dust

and craters, too.

Hiking here
is fun to do!

The moon
has weaker gravity.

Here we jump
much higher.
Whee!

Have we had fun?
Oh, yes. A lot!

We plant a flag
to mark the spot.

The time has come
to end our trip.

Goodbye, moon!
Hello, ship!

Back on Earth,
we see its light.

It shines by day
as well as night.

Keep shining, moon!

**THE
END!!**
